

### **Digital quality at an affordable price**

If you're looking for a high quality hearing aid to fit your budget, look no further than the new Beltone MIRA. The MIRA offers digital technology that can be tailored to perfectly match your hearing loss.

Whether it's your first hearing aid or a replacement for your existing device, the MIRA's exclusive digital processor ensures that sounds will neither be too soft nor too loud: they will always be pleasantly comfortable.

### **Comfortable listening – Beltone's trademark**

At Beltone we understand the problems that hearing aid users face. That's why the digital technology at the heart of the MIRA has been designed to ensure comfortable listening. For instance, the MIRA minimizes the annoying 'whistling' sound that can occur when using the telephone, or when eating while wearing a hearing instrument. And when you use the MIRA, you won't be disturbed by low-level noises like refrigerators, fans or computers. That's because it features Beltone's Silencer technology, which recognizes and corrects this type of sound.

### **Better hearing – in every environment**

The MIRA will help improve your hearing in everyday situations, especially those that are most relevant to you. With the help of your hearing care practitioner, you can define the MIRA listening programs that most closely reflect your needs.

With the push of a button, for example, you will find it easier to use the telephone, or mobile phone. There is also a program that makes conversation easier to follow – even in the presence of background noise, and another that allows you to hear better in quiet environments. Whether you are using the phone, at work or with your family, you will always notice a real difference – the unique Beltone sound.

## Choose the MIRA that suits you best

Everyone has different needs and lifestyles, which is why the Beltone MIRA is available in a range of popular shapes and colours, so you can be sure that your MIRA will look as good as it sounds. Your hearing care practitioner will guide you during the fitting procedure, so there's no need to guess which one is the right one for you.

Beltone offers a MIRA that can be concealed deep in the ear canal – the 'CIC', models that are partially concealed – the 'MC' and 'ITC', and the fuller 'ITE' version. Additionally, the 'behind-the-ear' model is also available, in beige, grey or brown. Whichever MIRA you select, we think you'll find that it offers superb quality and great value for money.

At last, a device that takes the guesswork out of choosing a hearing aid.
